

Step 1:
<https://usgbc.org>

The screenshot shows the homepage of the U.S. Green Building Council (USGBC). At the top, a browser address bar displays "usgbc.org". Below it, a teal banner contains the text: "Starting March 1, 2024, new LEED v4 projects must follow updated energy credit and prerequisite language. [Learn more](#)". The navigation menu includes "Our work", "LEED", "Professionals", "Education", and "Membership", along with a "Sign in" button and a search icon. The main visual is a large photograph of a modern building interior with a curved wooden reception desk. A white text box is overlaid on the image, containing the title "U.S. Green Building Council" and the text: "We are the global leader in green building. Join our community transforming buildings and communities, creating a better future and leaving a lasting legacy. [About us](#)." Below the text box are three circular navigation indicators. At the bottom of the image, a caption reads: "Chemonics HQ | LEED Gold | Photo: Connie Zhou". Below the image, the section "News & insights" is displayed, with a subtext: "Read articles about [decarbonization](#), [resilience](#), [advocacy](#) and [LEED](#). [See all articles](#)." A blue "Help" button with a question mark icon is located in the bottom right corner.

Decarbonizing the Built Environment: A Lifecycle and Supply Chain Perspective

As it becomes clear that the world is not on track to meet the Paris Agreement targets for temperature increases to limit global warming, there is a need to look at the larger systems producing GHG emissions. From building design to life cycle assessment, end-to-end supply chain management through the decarbonization lens in the built environment is critical to addressing global warming. It is also challenging due to its complexity.
